

National Child Passenger Safety Certification Training Program

Install a Belt-Shortening Clip

1. Place the lap belt through the car seat.

2. Buckle it.

3. Pull on belt to gather the excess webbing to be locked off or shortened near the retractor side.

4. Test for a tight installation of the car seat:

- Grab the seat at the belt path.
- Push and pull it with moderate force – front to back and side-to-side. It should **NOT** move more than 1 inch.

5. Place the belt-shortening clip near the retractor as noted in the vehicle owner's manual.

6. Double-back the top portion of the loop and thread it through the prongs of the clip.
