Module 4

Seat Belt Systems

Clarification on Inflatable Seat Belts

Inflatable seat belts utilize two separate belt systems – a lap belt and a shoulder belt. Each belt attaches to a shared sewn-on latch plate and has its own retractor. (Each belt does NOT have its own latch plate as indicated on *Technician Guide* page 4-15 and PowerPoint slide 4-22. The lap belt and a shoulder belt attach to the same latch plate.)
